2nd Printing, August 2012. Rev. 1

OVERVIEW

Logan Standard Releasing Spears provide a positive means to internally engage and retrieve a fish from the well. The design of this rugged, dependable, and inexpensive internal catch fishing tool ensures positive engagement, easy release, and re-engagement.

USE

The Logan Standard Releasing Spear can engage and retrieve tubing, casing, and drill pipe of all sizes. It may be used with other equipment such as spear pack-off assemblies and internal cutters.

CONSTRUCTION

The Logan Standard Releasing Spear consists of a mandrel, grapple, releasing ring, and a bull nose nut. The size and type of the upper box connection is furnished according to customer specification.

Mandrel

The mandrel type may be specified as either flush or shoulder. Flush-type mandrels are designed to completely enter the fish. Shoulder-type mandrels provide a positive landing position on top of the fish. The mandrel is made of high strength, specially heat-treated alloy steel. The lower end is threaded to accept a bull nose nut, or the optional sub, mill, and sidehill type nuts.

Standard Spear Grapple

One-piece spear grapples are designed and manufactured to engage a specific size and weight of tubing, casing, or drill pipe to ensure maximum surface engagement and minimum fish distortion.

Segment-Type Spear Grapple

The segment-type spear grapple enhances the spear's usefulness by providing an extended catching range

beyond the maximum range of the standard one-piece grapple. The Logan Segment-Type Spear Grapple consists of a grapple body, eight grapple segments, two retainer rings, four retainer ring screws, six retainer ring spacers, and sixteen grapple segment screws. *Refer to the illustration on page 12.*

Release Ring

The cammed release ring matches the cammed nut ensuring a positive locking device that will not freeze or jam. It is a standard component of the releasing spear.

Nut

The standard bottom nut is a bull nose nut. Optional nut types — sub, mill, and sidehill — are available. *Refer to the illustrations on page 3.*

When other tools, such as a spear pack-off assembly or internal cutters, will be utilized below the releasing spear, the sub type nut replaces the standard bull nose nut to provide the required connection.

The mill type nut mills away jagged ends of a fish to ensure entry into the fish. It can also effectively drill out sand from a plugged fish.

A sidehill type nut is used to align the Releasing Spear with a fish that is imbedded in the side wall of the hole.

Heavy Duty Releasing Spears

Logan Heavy Duty Releasing Spears (assemblies designated as "HD" in the parts lists) are used in situations where a swelling of the fish presents a problem. These assemblies have relatively longer mandrels and grapples than standard (STD) spears resulting in more supported wickered area to engage the fish. The longer mandrel and grapple distribute the swelling forces over a greater area, thereby substantially reducing those forces.

Heavy Duty Releasing Spears are less prone to damage from swelling of the fish and are actually stronger than a Standard Releasing Spear even though the tensile strength of the mandrels are the same.

Stop Sub Assembly

The Logan Releasing Spear Stop Sub Assembly is an accessory designed to convert a releasing spear with a flush-type mandrel into a shouldered type spear. It is installed in the box connection at the top of the mandrel when the use of a positive stop is desired or required.

A stop ring can be added to increase shoulder diameter. All stop rings are furnished with left-hand threads. *See page 32 for more information.*

Spear Pack-off Assembly

Pack-off assemblies are available for all Logan Standard Releasing Spear Assemblies and are designed to efficiently pack off all sizes of drill pipe, tubing and casing. Circulation through the fish is enabled by attaching the Spear Pack-off Assembly to the bottom of the spear with a sub type nut. *See pages 28 – 31 for more information.*

OPERATION

Precautions

Always maintain a moderate upward strain on the fishing string when rotating either to the left or right during operation.

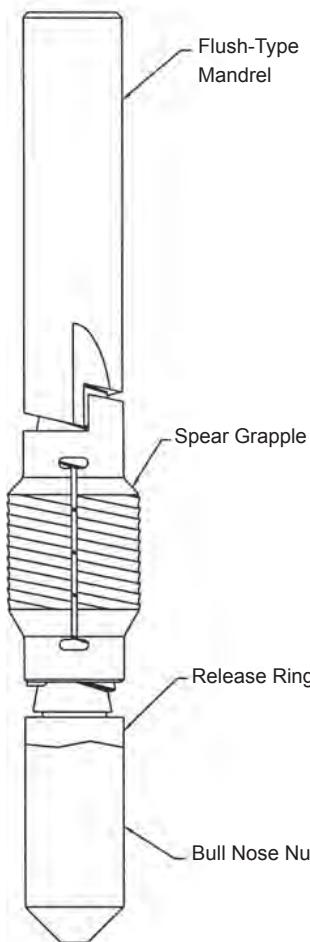

It may be necessary to rotate the fishing string more than a full turn to set or release the Releasing Spear in deep or crooked holes. Additional moderate rotation does not harm the Releasing Spear or the operation.

Always bump down the full weight of the fishing string before beginning the releasing operation.

A RUBICON PRODUCT BRAND

Internal Cutting

When running an internal cutter below the releasing Spear, replace the bull-nose nut with a sub type nut. Pipe between the internal cutter and Releasing Spear enables the Spear to remain above the fish during the cutting operation. The Spear is lowered into the cut-off section to retrieve it after the cut has been completed.

Engaging a Fish

The Logan Releasing Spear is made up to the bottom of the fishing string and lowered to the desired depth into the fish. Rotate the mandrel one full rotation to the left to turn the mandrel through the spear grapple and move the spear grapple into engaging position. Pulling straight up will cause the tapers on the mandrel to expand the spear grapple and allow it to positively engage the fish.

Releasing a Fish

To release the fish, bump down and make two to three rotations to the right. This right-hand rotation allows the mandrel to move up through the spear grapple thereby placing the spear grapple against the release ring and putting the spear in release position. Combined right-hand rotation with straight upward pull will release the spear from the fish. Continue with slow, right-hand rotation until the Releasing Spear is clear of the fish.

ASSEMBLY

Assembly of Releasing Spear

The Logan Standard Releasing Spear can easily be assembled at the rig site where it will be used.

Check all parts to ensure that they are in good working condition before beginning assembly. Make sure the Releasing Spear is the proper size for the operation. (*Refer to the Releasing Spear Grapple Range Charts on pages 15 – 23.*)

Thoroughly clean and lubricate parts. If the tool will be stored for a long period, paint or lubricate the exterior surfaces to prevent corrosion.

Refer to the illustration on page 3 and proceed with assembly as follows:

1. Clamp the Releasing Spear horizontally into a suitable vise, securing the upper mandrel joint end.

CAUTION: Use only enough gripping action in the vise to break the connections. Avoid making heavy tool marks.

2. Heavily grease the helix of the mandrel.

3. Install the spear grapple on the lower pin end of the mandrel, screwing it on with left-hand (counter-clockwise) rotation. Grease the interior of the grapple if it is large.

4. Slip the release ring onto the mandrel with the cams facing downward towards the nut.

5. Apply thread dope or lubricant to the threads on the lower end of the mandrel. Install the nut and tighten.

6. Screw the grapple down the helix until it rests against the release ring and nut. Hand tighten.

7. Paint or lubricate exterior surfaces to prevent corrosion.

8. Tighten all connections to the recommended torque before running the Standard Releasing Spear in the hole. Refer to the Recommended Tightening Torque tables on page 12.

Assembly is now complete and the tool is ready for service.

Assembly of Spear Pack-off

Refer to the illustration on page 5 and proceed with assembly as follows:

1. Clamp the assembly horizontally into a suitable vise, securing the lower end of the pack-off mandrel.

CAUTION: Use only enough gripping action in the vise to break the connections. Avoid making heavy tool marks.

2. Slide the stabilizer onto the mandrel.

3. Slide the packing cup onto the mandrel with the large open end facing downward. Make sure it is seated properly on the mandrel shoulder.

4. Slide the thimble onto the mandrel and onto the packing cup. Force it down tightly around the upper end of the packing cup.

5. Apply thread dope or grease to the mandrel threads. Install the adapter sub onto the mandrel and tighten.

6. Paint or lubricate the exterior metal surfaces of the assembly.

NOTE: Do not paint or lubricate the packing cup. Paint, sunlight, solvents, and most lubricants are harmful to rubber products.

Assembly is now complete.

MAINTENANCE

Maintenance of the Standard Releasing Spear and Spear Pack-off Assembly is simple, but important.

After each use, the tools should be completely disassembled, thoroughly inspected, and repaired as required.

Before reassembling, inspect all parts, especially the grapple. Check the wickers for damage and wear to ensure safe operation. Clean and lubricate parts as they are reassembled. Grease or paint the exterior to prevent corrosion.

Examine the packing cup of the Releasing Spear Pack-off Assembly for wear or damage. Replace the packing cup if necessary. (*Refer to pages 29 – 32 for packing cup and thimble part numbers.*)

LOGAN

A RUBICON PRODUCT BRAND

NOTE: Do not paint or lubricate the packing cup. Paint, sunlight, solvents, and most lubricants are harmful to rubber products.

Disassembly of Releasing Spear

Refer to the illustration at right and proceed with disassembly as follows:

1. Clamp the Releasing Spear horizontally into a suitable vise and secure the upper mandrel joint end.

CAUTION: Use only enough gripping action in the vise to break the connections. Avoid making heavy tool marks.

2. Loosen and remove the nut or spear pack-off-assembly.
3. Slide the release ring from the mandrel.
4. Remove the spear grapple by screwing it down the helix with right-hand (clockwise) rotation.

Disassembly is now complete.

Disassembly of Spear Pack-off

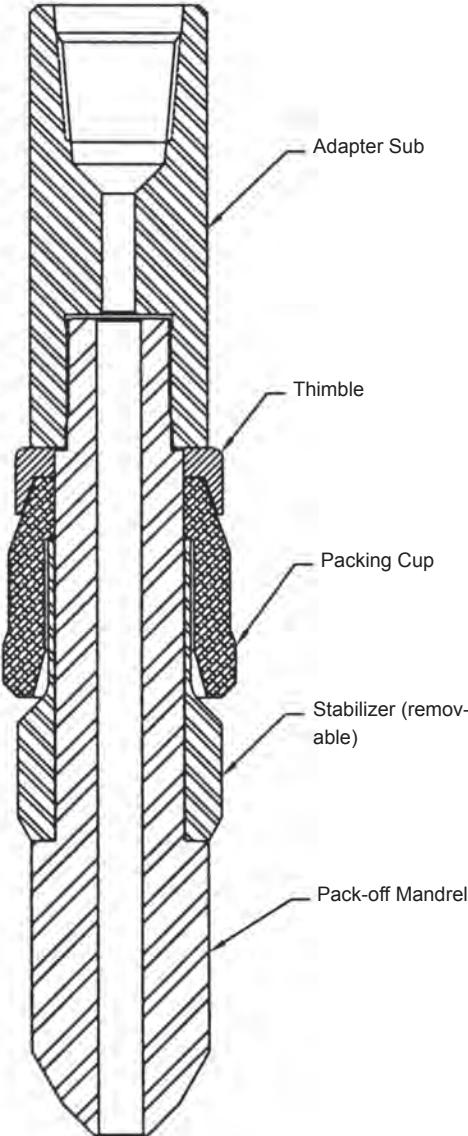

Refer to illustration at right and proceed with disassembly as follows:

1. Clamp the assembly horizontally into a suitable vise and secure the lower end of the pack-off mandrel.

CAUTION: Use only enough gripping action in the vise to break the connections. Avoid making heavy tool marks.

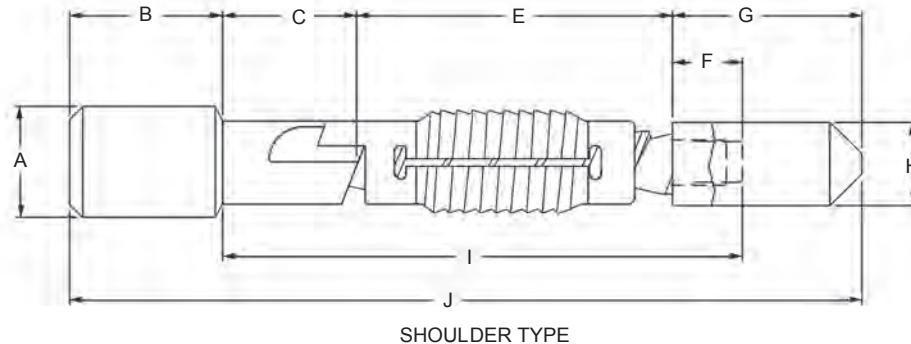

2. Loosen and remove the adapter sub.
3. Slide off the thimble.
4. Remove the packing cup.
5. Remove the stabilizer.

Disassembly is now complete.

Logan Oil Tools reserves the right to change or discontinue designs without notice.

When ordering, please specify:

- (1) Name and part number of assembly or part
- (2) Size and type of top connection
- (3) Size and weight(s) of pipe to catch
- (4) Flush or Shoulder type (specify O.D. of shoulder, "A")
- (5) Mandrel length desired "C"
- (6) Thread size and type of nut, if wanted

Recommended Spare Parts:

- (1) 2 Grapples for each catch size

* Grapples were marked with this description.

The strengths shown are theoretical calculations based on yield strength of the material used in each case.

The strengths shown are therefore accurate, plus or minus 20% of the figures shown, only.

These figures do not constitute a guarantee, actual or implied. They are meant to serve only as a guide and appropriate safety factor allowance must be made in use.

* Grapples were marked with this description.

The strengths shown are theoretical calculations based on yield strength of the material used in each case.

The strengths shown are therefore accurate, plus or minus 20% of the figures shown, only.

These figures do not constitute a guarantee, actual or implied. They are meant to serve only as a guide and appropriate safety factor allowance must be made in use.

Logan Oil Tools reserves the right to change or discontinue designs without notice.

* Sequence number to be determined

When ordering, please specify:

- (1) Name and part number of assembly or part
- (2) Size and type of top connection
- (3) Size and weight of pipe to be run in

Recommended Spare Parts:

- (1) 2 Packers for each size
- (2) 1 Thimble for each size

RELEASING SPEAR STOP SUB ASSEMBLY

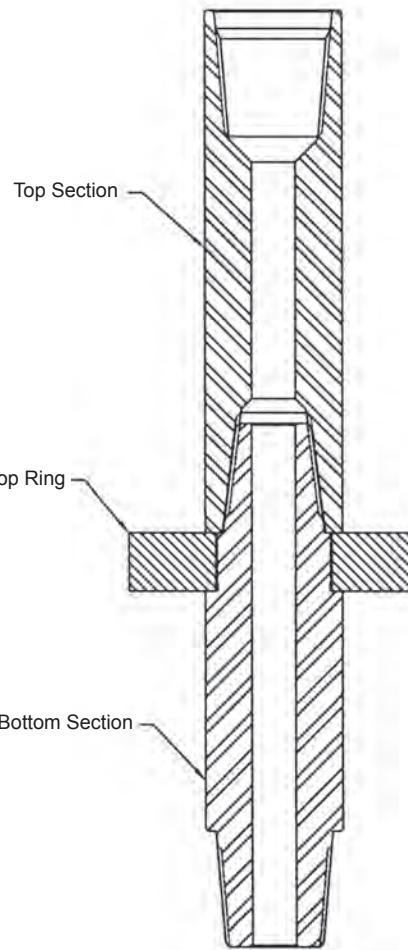

OVERVIEW

The Logan Releasing Spear Stop Sub Assembly is an accessory designed to convert a releasing spear with a flush-type mandrel into a shouldered type spear. It is installed in the box connection at the top of the mandrel when the use of a positive stop is desired or required.

A stop ring can be added to increase shoulder diameter. All stop rings are furnished with left-hand threads.

When ordering, please specify:

- (1) O.D. of Stop Sub
- (2) Length from stop to threaded connection
- (3) Top and bottom connection desired
- (4) Assembly number of spear on which the stop sub will be run
- (5) O.D. of Stop Ring
